Email: likhitdevadiga9@gmail.com | **Phone:** +91 9108185787

Automation enthusiast with 2 years of experience in UiPath and RPA concepts with, proven ability to lead teams and projects, and excellent communication skills with fluency in multiple languages, enabling seamless collaboration in diverse environments.

Education

- **Bachelor of Engineering** in Information Science and Engineering
  Alva's Institute of Engineering and Technology, Karnataka (2024)
  CGPA: 7.33

- **PUC**
  Vijaya PU College, Karnataka (2020).

- **High School**
  APJ Abdul Kalam Memorial High School, Maharashtra (2018).

Key Skills

- **Languages:** Python, C, SQL, Java, HTML/CSS

- **Tools and Platforms:** UiPath, Linux, Oracle VM, Jupyter Notebook, VS Code, Android Studio, Adobe Lightroom.

- **RPA Skills:** UiPath(Studio, Orchestrator), PDF, Excel, Web/UI, Email, Document understanding, OCR, Machine Learning, Database, and File Automation.

- **Soft Skills:** Team Leadership, Clear Communication, Multilingual (English, Hindi, Tulu, Marathi, Kannada).

Certifications

- UiPath Automation Developer Training.

- Advanced Python Programming.

- Google Cybersecurity Specialization (Python, Linux, SQL, SIEM tools).

- DBMS Expertise Certification.

- NPTEL Certification on IoT (Elite+Silver, 84%).

- Programming in C.

- Android Studio Essentials.

Professional Experience

Internship Project: RPA Attendance Marking Using Facial Recognition

- Led a team of 4 to develop an attendance system using facial recognition with Python and HTML/CSS (Flask-based frontend).

- Designed and implemented a UiPath bot to automate webpage interactions, CSV file retrieval, and file sharing via WhatsApp, saving 3+ hours weekly.

Additional RPA Project

- Developed a **Birthday Reminder Bot** using UiPath to send WhatsApp messages by matching dates in .xlsx files with the system date.

- Scheduled automation workflows in UiPath Orchestrator for daily execution, ensuring consistent delivery with minimal manual input.

Academic Projects

- **Forgery Image Detection Using AI and Image Processing**

    - Built a system to detect image forgery using CAT-NET (CNN technique) with 95% accuracy.

    - Delivered user-friendly interfaces using Gradio and showcased heatmap outputs for forgery localization.

- **DBMS Mini Project: Bus Reservation Management System.**

    - Guided a team of 2 individual on a project called "Bus Reservation Management System," which included database design, query implementation, and user interface development.

    - Achieved a 50% improvement in booking speed and a reduction in system errors by leveraging web technology to enhance system usability by 30%.

- **Android Mini Project: Medicine Reminder Application.**

    - Led a multi-disciplinary team of 3 individuals in creating an Android project using Android Studio and Java with a user-friendly interface.

    - Ensured timely and organized medication reminders for users and achieved an efficiency rate of 90%

Workshops

- UiPath Workshop (UiPath Academy)

- Python and C Programming (QSpiders)

- HTML/CSS and SQL/DBMS (NITK and Alva's Institute of Engineering and Technology)

- Linux Unhatched (Cisco)
